Unit 2, Part 2 Advanced Biology Test Review

Na	ame: <u>Answer</u> l	<u> Ley</u>	_ Date:		Hr:	Test #:	<u> </u>	
1.	What is an organic	compound?	carbon by living	containing things	compou	unds, manut ds,	act ured	
2.	Proteins,	nacromorec <u>Nu Cl€</u>	cic Acio	ds	1CS, UP	<u> </u>		
3.	Provide the definiti							
						ade of Cark	on,	
	Hydro	gen, d	oxygen	, H and O	ina 2	2:1 ratio		
				polar orga				
				mounts o				
	c. Protei	n-oro	janic cor	mpound ca	ompose	d mainly o	<u>f</u>	
	<u>carbo</u>	m Hy	drogen,	oxygen, ar	10 Nitr	rogen		
	d. <u>Nu clei</u>	ic Acid	d-comple	ex biologic	cal com	pounds ma	de ·	
	of ch	ains c	of huch	entides, se	erve as	instruction	ns	
4.	Name a function for	or each mac	romolecule.	IS				
	a Carbon	ydrate	e-enero	14 source				
	b. Lipid	<u>– ener</u>	gy Store	age, make	-up cell	membrane	<u>2 ·</u>	
,	c. <u>Proteir</u>	n-str	uctural,	defensive	, catal	ysts	<u> </u>	
	d. <u>Nuclei</u>	<u>c Acid</u>	1- genet	ic info			<u> </u>	
5.	What are some examples of each macromolecule?							
	a. Carbo	hydra	te-gluc	ose, Fructo	ose, sta	rch		
-				ited fats,				
•	c. Proteil	n-en:	zymes				r.0	
	d. Nuclei	C Acid	- DNA, F	NA, ATP		-		
6.	What are the three types of carbohydrates? Monosaccharide, Disaccharide, Polysaccharid							
7.				carbohydrates?2				
8.	What is the ratio of	f Carbons to	Hydrogen to (Oxygen in monosacc	charides?	: 2:1	· .	
9.	What are the mono	What are the monomers for each of the 4 macromolecules?						
	a. Carbohydra	ate: <u>Mon</u> c	osa cchai	ride_				
	b. Lipids: 6	ly cerol	+ Fath	y Acids				
		. •	Acids	T				
	d. Nucleic Ac	ids: Nu	cleotide	2				

10. What are the four functional groups? Know their formulas.
a. Hydroxyl - OH
b. Carboxyl CODH
c. Amino- NH2
d. Phosphate- 0-18-04
11. What is an enzyme? Why are they important?
a. Enzyme-proteins that act as catalysts in living
organisms (digestive enzymes, without enzymes
the chemical reactions would occur too slowly)
12. Proteins are built from chains of amino acids called <u>poly peptides</u> (Hint: think "many"
and name of the bond used in proteins)
13. Why are lipids good energy-storage molecules? Because they have many
carbon: Hydrogen Bonds
14. What are the three classes of lipids? Trigly ceride, Phospholipids, waxes
15. How can proteins be denatured? Change in To, pH, introduce inhibitor
16. Be able to recognize the structural formulas of a carbohydrate, lipid, nucleic acid, and protein.
17. Describe the difference between dehydration synthesis and hydrolysis. Dehydration
synthesis: taking 2 small molecules and removing
a water to form a large molecule. Hydrolysis:
breakdown of a large molecule into small
molecules by adding a water
